In electrical engineering and mechanical engineering, a transient response is the response of a system to a change from an equilibrium or a steady state. The transient response is not necessarily tied to abrupt events but to any event that affects the equilibrium of the system. The impulse response and step response are transient responses to a specific input (an impulse and a step, respectively).

El motor paso a paso (Stepper) conocido también como motor de pasos es un dispositivo electromecánico que convierte una serie de impulsos eléctricos en desplazamientos angulares discretos, lo que significa que es capaz de girar una cantidad de grados (paso o medio paso) dependiendo de sus entradas de control. El motor paso a paso se comporta de la misma manera que un conversor digital ...
