The atom consists of discrete particles that govern its chemical and physical behavior. Each atom of an element contains the same number of protons, which is the atomic number ( $Z$ ). Neutral atoms have the same number of electrons and protons. Atoms of an element that contain different numbers of neutrons are called isotopes.

answer key pearson

While you'll be given a periodic table, you need to know the symbols of common elements and which ones form diatomic molecules. A bit of common knowledge is useful, too. While hydrogen, nitrogen, oxygen, and fluorine all exist as diatomic gases, most of the atmosphere is nitrogen. 2.
