In the second edition, Goldstein corrected all the errors that had been pointed out, added a new chapter on perturbation theory, a new section on Bertrand's theorem, and another on Noether's theorem. Other arguments and proofs were simplified and supplemented. Before the death of its primary author in 2005, a new (third) edition of the book was released, with the collaboration of Charles P. Poole and John L. Safko from the University of South Carolina.

This course closely followed H. Goldstein's "Classical Mechanics" (3rd Ed.), although we jumped around a bit and also skipped the section on relativity. Many of the homework problems were created by the instructor or taken from past qualifying exams, so I only included solutions for the problems out of Goldstein. Resources:
