Mitosis and Meiosis are both ways in which cells are divided into the body. Meiosis involves the creation of cells that are not genetically identical where, as in mitosis, the cells are the same as the parent cell. The quiz below will test how much you know about the processes. Give it a try!

The similarities between mitosis and meiosis are as follows: Mitosis and meiosis take place in the cell nuclei. Both involve cell division. Both the processes occur in the M-phase of the cell cycle. In both cycles, the stages are common - metaphase, anaphase, telophase and prophase. Synthesis of DNA occurs in both.

Mitosis is much shorter than interphase, lasting perhaps only one to two hours. As in both G1 and G2, there is a Checkpoint in the middle of mitosis (Metaphase Checkpoint) that ensures the cell is ready to complete cell division. Actual stages of mitosis can be viewed at Animal Cell Mitosis. Cancer cells reproduce relatively quickly in culture.

Meiosis describes the process of cell division by which gametes are made. In this process, we begin with a cell with double the normal amount of DNA, and end up with 4 non-identical haploid daughter gametes after two divisions.. There are six stages within each of the divisions, namely prophase, prometaphase, metaphase, anaphase, telophase and cytokinesis.
